IOS DEVELOPER

Made a simple app named Bucket List
In this project, I build an app that lets the user build a private list of places on the map that they intend to visit one day, add a description for that place, and save it all to the iOS storage for later.

Second simple Guess Flag app
with SwiftUI(used VStack, LinearGradient, Image, etc)

The third project named ViewsAndModifiers
this app shows how Views and Modifiers work in SwiftUI

Fourth app named BetterRest
This app help the coffee drinker to take good night sleep

Fifth app named Animations
This app shows how animation works in SwiftUI

The Sixth app named iExpense
This app shows how data is shared between different screens and how user data save.

Seventh project MoonShot
This app made with a swiftUI especialy using Codable

Eighth project Drawing
This project how drawing looks in SwiftUI

Ninth Project named CupCakeCorner
This shows how codable, UrlSession works, how to load image from remote server, how validate or disable forms and how to get the order over the internet.

Tenth Project named BookWorm
This project shows how CoreData is combined with SwiftUI

Eleventh Project named Instafilter
This project shows how core Image works and to integrate SwiftUI with UIkit.
